DETAILED ACTION

Applicant's election without traverse of Group I, claims 25-49 in Paper No. 10, filed 12/2/02 is acknowledged. However, upon further review and consideration of the application, it was determined that a further election of species within Group I is appropriate, which is set forth below. The examiner apologizes for the examination delay caused by the new election of species requirement.

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

DNA sequence involved in the induction of gene-transcription repressing chromatin. The different species are drawn to the claimed method using the different species of DNA sequences. Pick one species from the following, for example: DNA sequence that is recognized by a heterochromatin-binding protein comprising HP1, DNA sequence that is recognized by a complex comprising a Polycomb-group protein, DNA sequence that

Art Unit: 1636

is recognized by a complex possessing a histone deacetylase activity, DNA sequence that is recognized by a protein complex comprising MeCP2, DNA sequence that is recognized by LexA, and DNA sequence that is recognized by Gal4.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: claims 25-38 and 43-49.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The different species are drawn to the use of different DNA sequences involved in the induction of gene-transcription repressing chromatin,

Art Unit: 1636

which sequences have sequences and structures different from each other and thus lack the same or corresponding special technical features.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

The faxing of such papers must conform with the notices published in the Official Gazette, 1156 OG 61 (November 16, 1993) and 1157 OG 94 (December 28, 1993) (see 37 C.F.R. § 1.6(d)). The official fax telephone numbers for the Group are (703) 308-4242 and (703) 305-3014.

NOTE: If Applicant does submit a paper by fax, the original signed copy should be retained by applicant or applicant's representative. NO DUPLICATE COPIES SHOULD BE SUBMITTED so as to avoid the processing of duplicate papers in the Office.
